

CATTLE- AND PIGFARMS – FINLAND

ZINGA has been used in pig farms already for nearly 15 years: mostly in re-coating existing galvanized surfaces and in recent years also using **ZINGA** as a stand-alone system.

Surfaces are sandblasted to at least SA 2,5 and **ZINGA** is applied:

- to normal areas 1 x 50 µm DFT
- fittings at floor level are treated with 3 to 4 layers of 50 µm which offers an even longer lasting surface.

ZINGA clearly offers a friendly and easy maintenance scheme with re-charging (re-loading) of the anti-corrosion protection of the structures.

System:

ZINGA

1 to 4 x 50 µm DFT
