

ABADAN SHIRAZ REFINERY – IRAN NATIONAL OIL COMPANY – IRAN

The Abadan and Shiraz Refineries are part of the **IRAN NATIONAL OIL COMPANY**. They have been constructed in the early 80's. **ZINGA** was introduced to these complexes in 1993.

Initially the existing structures had been painted or hot-dipped, therefore the main consumption of **ZINGA** was used for repairs and the covering of weld lines. In total about 400 Kg of Zinga was consumed on many different parts and locations. **ZINGA** was applied at a layer thickness of approx. 80 µm as a unique system.

This is a testimonial letter from the Abadan Refinery dated 09-08-1995.

The **ZINGA** was found to be still in a good condition in February 2003.
