

DECK GRATINGS of ARCTIC LNG-2 Project – KLIVER YARDS NOVATEK - Gydan Peninsula, RUSSIA

The **ARCTIC LNG-2** Project consists of the building of 3 LNG terminals, totalizing an LNG capacity of 19.8 Million tons, for the exploitation of the Utrenneye Gas Field, 70 km across the Ob Bay. The project employs an innovative construction concept using gravity-based structures.

In July 2020, our Russian Distributor **ZINGA LLC-OOO**, supplied **ZINGA** to **KLIVER YARD** (Svetlyi, Kaliningrad) and they started applying ZINGA as stand-alone system on about 1,000 m² of gratings for the gravity-based decks.

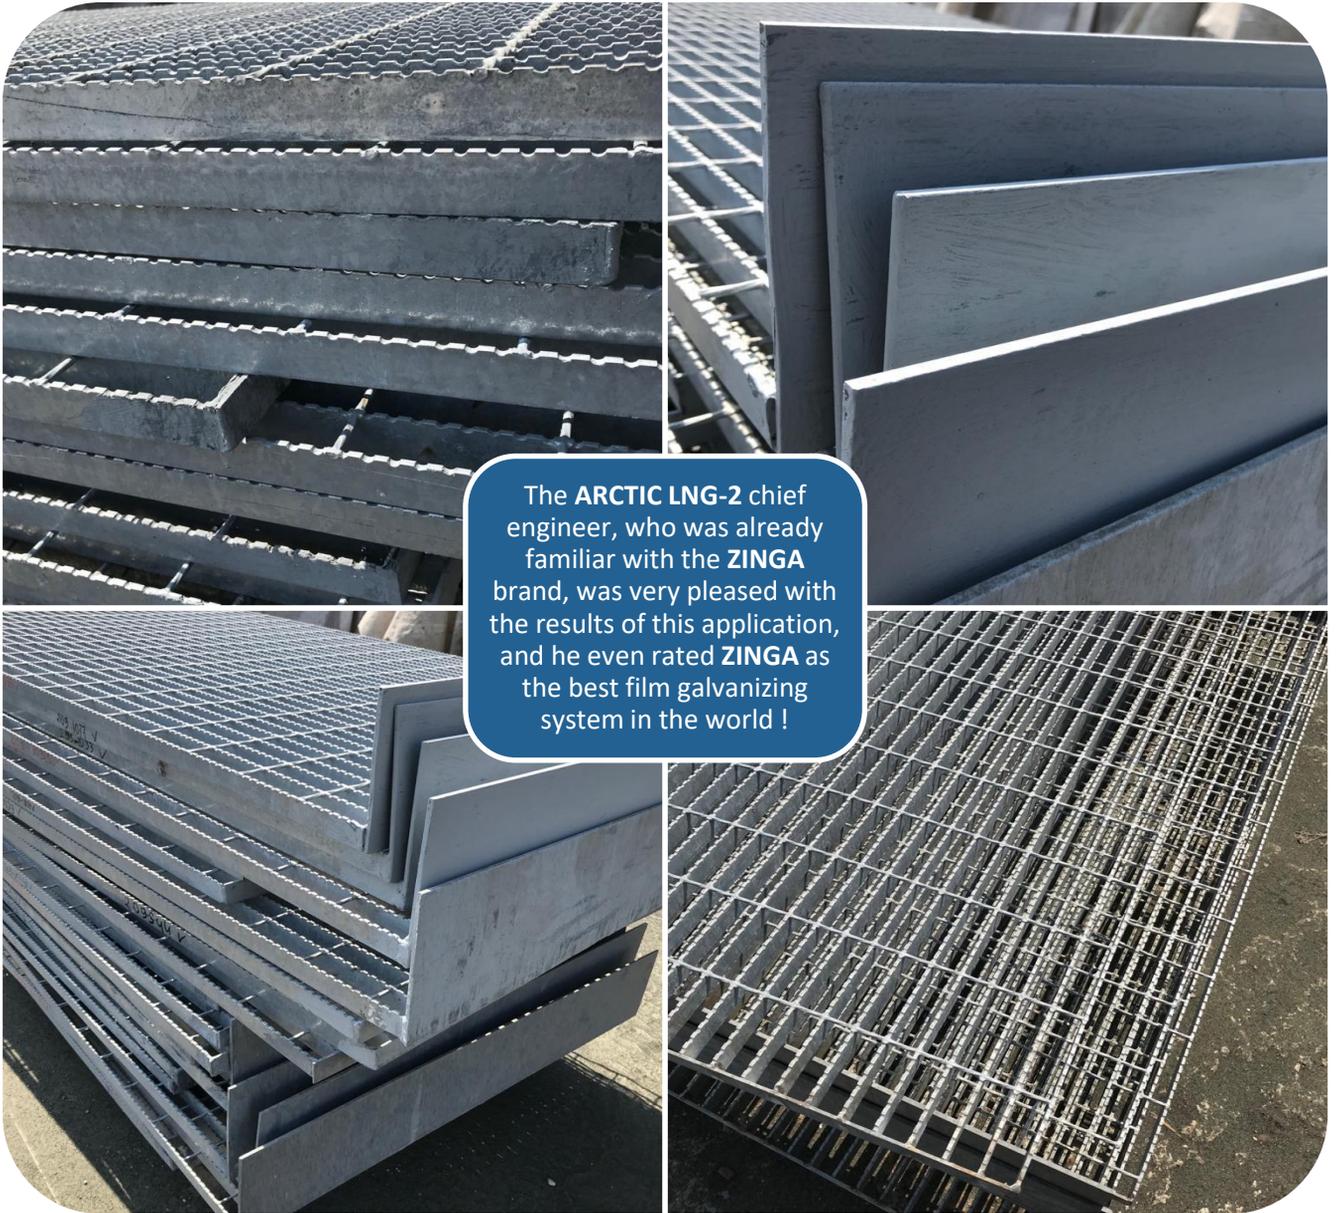

The whole project is owned by **NOVATEK**, the largest independent natural gas producer in Russia.

The **ARCTIC LNG-2** Project is located in the Gydan Peninsula in the Ob Bay, in Ynao.

Artist's impression of the **ARCTIC LNG-2** Plant

The **ARCTIC LNG-2** chief engineer, who was already familiar with the **ZINGA** brand, was very pleased with the results of this application, and he even rated **ZINGA** as the best film galvanizing system in the world !
