

THE HEADQUARTERS BUSINESS PARK TOWER JEDDAH – SAUDI ARABIA

In 2009 the plans for a **Business Center Tower** in Jeddah, Saudi Arabia, were drawn.

The site for this business center offers +/- 75 000 m² of prestigious and efficient office space for sale served by generous foyers, shared conveniences and amenities, good lifting service and ample parking.

It hosts 3 towers. The first one (West) has 54 stories (240 m) with a panoramic view restaurant in the last floor. The middle tower has 8 floors and it is mainly used as a parking with a 9000 m² garden in the last floor. The East tower has 13 floors and is used as offices building.

The lift of the West building takes the guests from the 8th to the 54th floor.

During construction of the building from 2010 until 2013, **ZINGA** was specified instead of hot dip galvanization (by **Saudi Diyar Consultant**) for about 30 tons steel beams at the water treatment station located at an open area on the 16th floor of the Eastern tower.

System:
ZINGA 2 x 60 µm DFT
